SIBO Fluidra Netherlands B.V.

Since the establishment in 1993 SIBO has grown to a specialized enterprise majoring in (swimming) pond products, swimming pool and bio-pool equipment, plastic pipes and fittings and irrigation. With our Professional Water Products we serve a wide variety of installers, retailers and online shops in more than 50 countries. Since 2016 SIBO is a part of the Fluidra Group. Years of valued experience in the pond business, combined with insights into the swimming pool branch, gives SIBO Fluidra Netherlands a perfectly tuned product range for the filtration and maintenance of swimming ponds. The product range includes filters, pumps, UV-C units, water treatment equipment, PVC/PE pipes & fittings, water conditioners and heaters. As a contemporary enterprise we pay a lot of attention to innovation and progression.

SIBO Fluidra in Veghel, with its partners, is involved in the well-being of swimmers and the environment. It is her aim to supply products for safe, healthy and clear water, so swimmers can enjoy their swimming pond carefree using these products.

THE NATURAL BEAUTY OF A SWIMMING POND

OUR PRODUCTS FOR A CLEAR AND HEALTHY SWIMMING POND

AQUAFORTE SIEVE FILTERS

AquaForte sieve filters is mainly used as a pre-filter. It removes coarser dirt particles from the swimming pond water before it gets to the main filter. A pre-filter like a Beadfilter. Aquaforte has several sieve filters in its range such as the UltraSieve, UltraSieve Low and the MidiSieve. The way to maintain UltraSieve filters is to cut off the arrow valve. The arrow valve can be used to set various functions, such as cleaning the filter without dirtying your hands.

MICROBE-LIFT BACTERIA

Microbe-Lift supplies biological products for keeping the swimming pond water clear and healthy. The company developed a maintenance line especially for natural swimming ponds. The list consists of Microbe-Lift Natural-Clear, Microbe-Lift Natural Algae Control and Microbe-Lift Natural Sludge Reducer. The benefits: it contains no ingredients that are harmful to people, animals or the environment. A Microbe-Lift line offers a wider range of environmentally friendly biological products. A bottom drain takes care of the dirt sediment in the bottom of a swimming pond. It consequently removes the dirt and transport it through the drain to the pre-filters.

BLUE ECO PUMPS

Blue Eco pumps have a fully adjustable flow and consume up to 50% less energy. The benefits are not only your electric bill, but also CO₂ reduction and the environment.

AQUAFORTE BEAD FILTERS

AquaForte has several bead filters in its range, such as the UltraBead and the Aquasieve. The headline of the headline is the number 1 in filtration. It combines fine mechanical and biological filtration in one filter. It is easy to install and to operate using the arrow valve. The arrow valve can be used to set various functions, such as cleaning the filter without dirtying your hands.

UV-C WATER DISINFECTION

Floating algae are the main cause of green swimming pond water. UV-C equipment is an environmentally friendly solution for green pond water. The pump pumps the water through the UV-C unit, where the water comes into direct contact with the UV-C irradiation. This irradiation attacks the DNA of microorganisms in the water, such as bacteria, algae and insects. As a result they can no longer reproduce and they disappear from the swimming pond.

SUGAR VALLEY WATER TREATMENT SYSTEMS

Sugar Valley has more than 20 years of experience in developing and manufacturing water treatment systems for pools and swimming ponds. Especially for swimming ponds Sugar Valley offers the Aquasieve, an integral and fully automatic water treatment solution. The Aquasieve cleans water (H₂O) with its own components of H and O, generating oxygen and ozone. It is an energy system on its market which works with their water and without chemical production. The Aquasieve keeps swimming pond water transparent year after year.

AQUAFORTE SKIMMERS AND BOTTOM DRAINS

Owing to the changing weather conditions, debris such as leaves and dead insects regularly blows into the swimming pond. Skimmers catch this debris, so that the water surface is kept clear. Aquaforte offers a wider range of environmentally friendly filtration skimmers. A bottom drain takes care of the dirt sediment in the bottom of a swimming pond. It consequently removes the dirt and transport it through the drain to the pre-filters.

AQUAFORTE SIEVE FILTERS

AquaForte sieve filters is mainly used as a pre-filter. It removes coarser dirt particles from the swimming pond water before it gets to the main filter. A pre-filter like a Beadfilter. Aquaforte has several sieve filters in its range such as the UltraSieve, UltraSieve Low and the MidiSieve. The way to maintain UltraSieve filters is to cut off the arrow valve. The arrow valve can be used to set various functions, such as cleaning the filter without dirtying your hands.
This type of swimming pond offers a natural experience, good plant growth and a diverse fauna. The carefully chosen technique guarantees clear water all year round. Applied technique: bottom drains, skimmers, sieve filters, bead filters and UV-C units. Maintenance is done periodically but regular maintenance is reasonably light. Swimming ponds offer an intense natural experience.

**TYPE I PURE NATURE**

To swim in pure water without chlorine or other chemicals. More and more people decide for the natural beauty of a swimming pond. Delightful to swim in, but also beautiful to look at. Years of valued experience in the pond business, combined with insights into the swimming pool branch, gives SIBO a perfectly tuned product range for the filtration and maintenance of swimming ponds.

**TYPE II NATURAL**

This natural swimming pond offers a very rich natural experience, very exuberant flora and a diverse fauna. This type does not use filter technique but can use a small cascade, fountain or water figure. Periodic cloudy water is normal in natural ponds, but the water will be mostly clear. There is, as a low-energy contrast, no need to use skimmers and skimmer. The walls of the pond will not be free of algae and biofilm growth. The use of bacteria formulas is strongly recommended to cut maintenance and to improve the water quality in general. Type II swimming ponds offer a very intense natural experience.

**TYPE III CLEAR**

This type of swimming pond offers a natural experience, good plant growth and a diverse fauna. The carefully chosen technique guarantees clear water all year round. Applied technique: bottom drains, skimmers, sieve filters, bead filters and UV-C units. Maintenance is done periodically but regular maintenance is reasonably light. Swimming ponds offer an intense natural experience.

**TYPE IV CRYSTAL CLEAR**

This type of swimming pond offers a natural experience, good plant growth and a diverse fauna. The carefully chosen technique guarantees clear water all year round. Applied technique: bottom drains, skimmers, sieve filters, bead filters and UV-C units. Maintenance is done periodically but regular maintenance is reasonably light. Swimming ponds offer an intense natural experience.

**TYPE V BIOPOOL**

Optically a traditional pool but powered by swimming pond filter technology and natural micro-algae bloom filters. Optional use of hydrocyclone suckers and heat pumps. Besides the use of any existing pumps, fabrics and water, the pond is made up of an extensive pool bed.
